SUMMARY

Full Stack Developer with 4+ years building and maintaining production web applications, currently the only in house engineer at a 1,000+ agent real estate firm in the UAE. Owns application architecture, technical standards, and end to end delivery across front end and server side systems integrated with 3 live CRMs. Contributed to transitioning development work in house from an external technical provider. Experienced in REST API integration, PostgreSQL data modelling, Agile delivery, and translating business requirements into production ready solutions.

EXPERIENCE

Property Shop Investment

June 2024 – Present

Web Developer

- Sole in house developer across **5+ internal systems** at a 1,000+ agent real estate firm, owning application architecture, technical standards, and development best practices.
- Contributed to the **transition of development work in house** from an external technical provider, taking internal ownership of user facing systems and portals while the provider retained the core database and CRM layer.
- Built and maintained **secure RESTful API integrations** across 3 live CRM systems, implementing proxy scripts to protect API credentials, role based access control, and session authentication across all production portals.
- Built and maintained **server side functionality in PHP** in production, including login authentication, CRM API proxy scripts, server side Excel processing, and automated email workflows using AWS SES and SNS.
- Built a **Python ETL pipeline** extracting data from multiple APIs, cleaning with Pandas, and loading into a centralised database for downstream Power BI reporting.
- Built the **Emirati Hub Portal** for 100 local agents in 7 working days, reverse engineering APIs across 3 CRM systems with dynamic lead routing, front end deduplication, and unified session auth.
- Developed the **International Events Portal** replacing paper lead tracking, Google Form surveys, and siloed emails across 4 departments with a unified role based system capturing 700+ leads.
- Rebuilt dashboard interfaces and delivered front end components for the company's **Odoo ERP**, working with the platform's product owner to integrate them into the system.
- Built the front end for **PSAI**, an AI powered tool eliminating manual CRM data entry for 3 to 5 real estate project launches per month via document extraction and one click insertion.
- Currently building the company's **new official website** as the sole developer.
- Attend early **business requirements meetings** as the technical representative, working directly with finance, business development, and marketing, and acting as technical point of contact for an incoming developer.
- Worked within established **CI/CD pipelines** and deployment processes across development and production environments, and built deployment pipelines with automated testing for independently developed projects.
- Maintained **comprehensive technical documentation** in Confluence covering API usage, system architecture, and development standards to support knowledge transfer across the team.
- Maintained **90%+ Lighthouse scores** across all projects, introduced feature based architecture as the team standard, and conducted code reviews to ensure consistent quality.

Freelance

August 2022 – June 2024

Full Stack Developer

- Delivered production web projects for UAE businesses including a **WordPress e-commerce store**, holiday rental platform, and campaign landing pages with third party system integrations.
- Built a **hybrid Telegram bot for Arazone** (forex sector) using Python, Telegram API, and SQLite for session management, automating a multi step client onboarding flow with human handoff at compliance sensitive steps.

PROJECTS

Raqeem – Full Stack SaaS Platform

2026

Personal Project

- Designed and built a **multi tenant management platform** end to end, covering monorepo architecture, PostgreSQL schema design, and the data model, authorization layer, and application logic.

- Implemented **multi tenant data isolation using row level security** at the database layer, with role based access control across three user roles and a separated client, server, and privileged access model.
- Built profitability reporting using **SQL views** computing per record net figures from linked expense data, rolled up into an analytics dashboard with period over period comparison.
- Delivered a full **bilingual English and Arabic** interface with RTL support across the application.

TECHNICAL SKILLS

Front End: React, Next.js, JavaScript, TypeScript, Tailwind CSS, HTML, CSS, SASS, Bootstrap, Framer Motion, Zustand, React Query, Material UI, Shadcn/UI, ECharts

Back End: Node.js, Express, REST APIs, PHP, Python, WebSockets, Authentication & RBAC

Database: PostgreSQL, SQL, MySQL, MongoDB, SQLite, Data Modelling, ETL

Testing: Vitest, React Testing Library, Playwright

DevOps & Cloud: Git, GitHub, CI/CD, AWS (SES, SNS), Docker (familiar)

Design & Collaboration: Figma, Jira, Confluence, Scrum, Agile

Other: WordPress, Odoo, Performance Optimization, Responsive Design, Accessibility (WCAG), API Documentation

EDUCATION

Teesside University

Bachelor of Science in Computing

May 2023

Middlesbrough, UK
