SUMMARY

Front-End Engineer with 3+ years building production-grade portals, CRMs, and analytical dashboards from zero. Sole front-end engineer at a 1,000+ agent real estate firm, owning all architectural decisions and delivering pixel-perfect, tested interfaces across 5+ internal systems integrated with 3 live CRMs. Designs, builds, and delivers end-to-end — from requirements meetings to production.

EXPERIENCE

Property Shop Investment

June 2024 – Present

Front-End Engineer

- Served as **sole front-end engineer** across 5+ internal systems at a 1,000+ agent real estate firm, owning all architectural decisions, some UI/UX designs, and end-to-end delivery.
- Built the **Emirati Hub Portal** for 100 local agents in **7 working days** — reverse-engineering APIs across 3 CRM systems with dynamic lead routing, front-end deduplication, and unified session auth.
- Developed the **International Events Portal**, replacing paper lead tracking, Google Form surveys, and siloed emails across 4 departments with a unified role-based system.
- Built the front end for **PSAI**, an AI-powered tool eliminating manual CRM data entry for 3–5 real estate project launches per month via document extraction and one-click insertion.
- Delivered the **BrightCall Power BI dashboard** unifying 3 heterogeneous data sources, replacing ~3–4 hours of weekly manual reconciliation for Finance and Sales Ops.
- Maintained **90%+ Lighthouse scores** across all projects, introduced feature-based architecture as team standard, and mentored an incoming front-end engineer.
- Wrote **CRM API documentation in Confluence** and built Python automation scripts to bulk-process 200+ contact operations — replacing manual CRM actions used on-demand across the team.
- Built PSI's **external partner ecosystem** — a loyalty landing page integrated with the CRM (2024), a **partner portal** for 100+ external partners to track and manage leads (2025), and a **referral portal** for individuals and corporates to submit leads and track commissions — all featuring role-based access and live CRM integration.
- Implemented unit and component tests using Vitest and React Testing Library across critical agent-facing portal workflows, improving reliability and reducing regression risk.

Freelance

August 2022 – June 2024

Front-End Engineer

- Delivered web projects for real businesses including an **e-commerce store** (Culture Cycle), **holiday rental landing page** (Bait El Bahar), and **landing pages** (Falcon Island) — building responsive, production-ready front ends independently.
- Built a **hybrid Telegram bot for Arazone** (forex sector) using Python, Telegram API, and SQLite for session management — automating a multi-step client onboarding flow with seamless human handoff at compliance-sensitive steps.

TECHNICAL SKILLS

Core Stack: React, Next.js, JavaScript, TypeScript, Tailwind CSS

Front-End: HTML, CSS, SASS, Bootstrap, Framer Motion, GSAP, jQuery, Zustand, Context API, React Query, React Hook Form, Zod, Material UI, Shadcn/UI, ECharts, React Three Fiber (R3F), Three.js, WebGL

Testing: Vitest, React Testing Library, Playwright

API & Integrations: REST APIs, WebSockets, Postman, Swagger, API Documentation

Data & Analytics: Python, SQL, Power BI, SQLite

DevOps & Tools: Git, GitHub, CI/CD, FileZilla, AWS (SES, SNS)

Design & Collaboration: Figma, Canva, Jira, Confluence, Scrum, Agile

Other: WordPress, Performance Optimization, Responsive Design, UX/UI, Accessibility (WCAG)

EDUCATION

Teesside University

Bachelor of Science in Computing

May 2023

Middlesbrough, UK
